

The Research on Lowering Violence in Schools and Communities (ReSOLV) study is a nine-year study of relationships between school safety and student outcomes with community and school-based factors in California.

ReSOLV's results demonstrate the need to involve all stakeholders in the school and community to create safe places to live, work, and learn.

What You Can Do

Political Sector

- Recognize that risk and need in the community have a substantial impact on student educational and behavioral outcomes that may exceed what any single school can overcome on its own, and student success in school will result in lower community violence, which will make the community a more inviting place to live and work in.
- Use community climate surveys and other local data to understand community conditions that affect students, teachers, staff, and parents and use those insights to inform budget planning, programs, and policies.
- Develop new ways to connect more broadly and deeply with community members and schools, bringing them together in the policy process, prioritizing those who have difficulty engaging in traditional public policy processes due to work schedules, language barriers, or other accessibility issues.
- Fund collaboration between schools and community-based organizations that build student and family well-being outside of school, such as those focusing on economic empowerment, safe and stable housing, and food security.
- Fund community-based initiatives and organizations that provide safe passage to school and ensure there are crosswalks, traffic control, adequate lighting, well-maintained sidewalks, and other environmental improvements that improve the community and make it safer for students to attend school on a regular basis.

The Research on Lowering Violence in Schools and Communities (ReSOLV) study is a nine-year study of relationships between school safety and student outcomes with community and school-based factors in California.

Co-Investigators: Jonathan Scaccia, Ph.D., Dawn Chorus Group, Allyson Pakstis, Ph.D. & Roger Jarjoura Ph.D., AIR

Team: David Osher, Ph.D., Brittany Cook, Ph.D., Kenya Roy, Caleb Perlman, Shoshana Rabinovsky, Daniel Tei, Felice Trirogoff

STUDY GOALS

- To help schools understand how risk and need factors in the community influence student engagement and outcomes in school, while helping community leaders understand how violence prevention efforts in the community may benefit educational outcomes for youth, which in turn can prevent future violence.
- Provide insights on building the readiness for individuals, organizations, and the broader community to work together to address violence and safety issues using inclusive, equitable, and comprehensive strategies that are rooted in evidence of effectiveness.

STUDY HYPOTHESIS

Schools operate within a broader ecological framework and risk factors in the community can negatively affect student and school outcomes if schools are not actively working to recognize and mitigate these influences.

STUDY IMPLEMENTATION

- Study period: Jan. 1, 2014, to Dec. 31, 2022
- Study sites: Hanford, Mendota, and Los Angeles
- Study design: Three independent case studies
- Study methods: Mixed, quantitative (census, crime, geo-spatial, survey, achievement, discipline), and qualitative (documents, focus groups, interviews, observation, social media)

STUDY RESULTS

- Crime and concentrated disadvantage had an influence on higher chronic absentee rates, lower graduation rates, higher suspension rates, and lower percentages of students scoring at or above the median on standardized test results for English Language Arts and Math.
- Community risk factors explained school and student outcomes much better than did measures of the internal school climate, including feelings of safety, relationships, engagement, and learning supports.
- School climate was universally worse in schools surrounded by the greatest amount of community risk and need.

STUDY IMPLICATIONS

- It is not sufficient to simply “fix schools” in otherwise disadvantaged areas and expect to produce better safety and educational outcomes.
- To create safe and supportive learning environments within schools, equal attention must be paid to creating safe and supportive living environments using equitable strategies that engage a broader set of stakeholders.
- To this end, ReSOLV has developed an alternative response model for organizing school and community collective action. The model is forthcoming in the Journal of School Violence.
