Results from the Randomized Control Trial

Innovations for Poverty Action conducted a randomized control trial with 10,514 households to test the performance and cost-effectiveness of three variations of the graduation model.

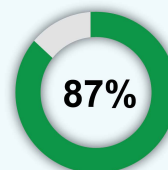

6,267 **2,172** **2,070** **42** **72**
Treatment Households Pure Control Households Spillover Control Households Refugee Villages Host Villages

Graduation

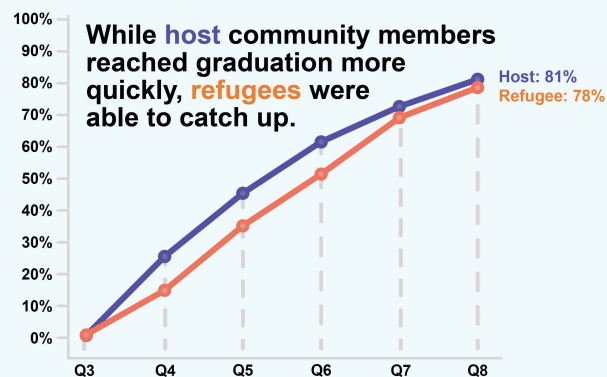

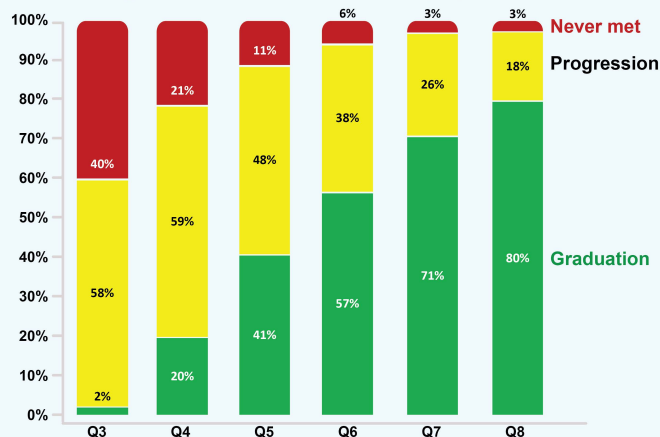

Households met graduation criteria for three consecutive quarters

Households met graduation criteria at least once

Just **3%** of households failed to meet the graduation criteria in any quarter

Food security increased among all treatment groups.

Well-being increased among all treatment groups.

The individual and group coaching models had similar impacts, but the group coaching model cost 13% less.
